BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

IMAGES ARE BEST AVAILABLE COPY.

As rescanning documents will not correct images, please do not report the images to the Image Problem Mailbox.

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 3, 4, 6-14, 17-22, 29 and 31 are rejected under 35 U.S.C. 102(b) as being anticipated by Yoon, 5,842,971.

Yoon discloses an elongate body (18) comprising a proximal end defining an inlet, and a distal end defining an outlet, the elongate body defining a passageway; and a diffuser element (22) operatively associated with the elongate body so as to define a diffusion space (i.e., space occupied by 20), wherein the diffusion space is in fluid communication with the elongate body passageway, see column 9, lines 34-42; wherein a drug at a first concentration is introduced into the elongate body inlet moves through the elongate body passageway, out the elongate body outlet, into the diffusion space, see column 9, lines 38-42, and further wherein fluid from the environment outside the device passes into the diffusion space through the diffuser element, wherein the fluid mixes with the drug, thereby diluting the drug to a second concentration within the diffusion space, and wherein said diluted drug then diffuses out through the diffuser element to exit the device, see column 9, lines 34-44.

Art Unit: 3763

As to claim 2, the diffuser element is the diffuser element comprising a material selected from the group consisting of a microporous membrane, see column 9, lines 42-44.

As to claim 4, the elongate body is defined by an exit orifice of a drug delivery device having a diffuser element provided as a cap (22) attached to the exit orifice (48).

As to claim 6, the diffusion space is defined by an outer wall of the elongate body (18) and an inner wall of the diffuser element (22).

As to claim 7, said diffuser element (22) envelops at least a portion of said elongate body (18), see Figure 2.

As to claim 8, the diffuser element is microporous, see column 9, lines 42-44.

As to claim 9, the diffuser element is a dense membrane, see column 9, lines 42-

As to claim 10, the diffuser element is an ion-exchange membrane, see column 9, lines 42-44.

As to claim 11, said diffuser element distal end extends distally beyond the elongate body distal end, see Figure 2.

As to claim 12, the diffuser element distal is ring-shaped element, see Figure 2.

As to claim 13, the diffuser element is substantially impermeable to components of biological fluids.

As to claim 14, the diffuser element is selectively permeable to water, see column 9, lines 38-40.

As to claim 17, the elongate body comprises at least two outlets (48).

Art Unit: 3763

As to claim 18, the elongate body defines at least two passageways (36A).

As to claims 19 and 24, the elongate body passageway is adapted for delivery of agent at a low volume rate, see column 9, lines 38-44.

As to claim 20, the device is attached to a drug delivery reservoir, see column 9, lines 40-41.

As to claims 21 and 22, the drug delivery device is a convective drug delivery device, and is implantable.

As to claim 25, the drug moves through the elongate body passageway, out the elongate body outlet, into the diffusion space, and further the water from the environment outside the device passes into the diffusion space through the diffuser element wherein the water mixes with the drug, thereby diluting the drug to a second concentration within the diffusion space, and the drug then diffuses out through the diffuser element to exit the device, see column 9, lines 34-44.

As to claim 29, the diffuser element comprises a polymeric film, see column 8, lines 28-33.

As to claim 31, the diffuser element is impermeable to drug and permeable to water, see column 9, lines 38-40.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the

Art Unit: 3763

subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 30 is rejected under 35 U.S.C. 103(a) as being unpatentable over Yoon, 5,842,971.

Yoon discloses the invention substantially as claimed, except for the diffuser element having a Diffusion Coefficient value in the range between 4.1 x 10-6 and 3.3 x 10-5 ug/cm/sec. However, it would have been obvious to form the diffuser element as described above to have the specific Diffusion Coefficient as claimed, since it would have been obvious to form the diffuser element in a given size or to form the holes in a different size as necessary to accommodate a particular patient or particular medical procedure, see column 33, lines 42-46.

Response to Arguments

Applicant's arguments with respect to the above rejected claims have been considered but are most in view of the new ground(s) of rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ann Y. Lam whose telephone number is (703) 306-5560. The examiner can normally be reached on T-F 8-6:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Brian L. Casler can be reached on (703)308-3552. The fax phone numbers for the organization where this application or proceeding is assigned are (703)305-3590 for regular communications and (703)306-4520 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703)308-0858.
